Tutorial on XML - XPATH

Consider the following XML document.

```xml
<?xml version="1.0" encoding="ISO-8859-1"?>

<bookstore>

<!-- a bookstore database -->

        <book isbn= <book isbn= 111111 cat= fiction > "111111" cat="fiction">

        <!-- a particular book -->

                <title lang="chn">Harry Potter</title>

                <price unit="us">79.99</price>

        </book>

        <book isbn="222222" cat="textbook">

                <title lang="eng">Learning XML</title>

                <price unit="us">69.95</price>

        </book>

        <book isbn="333333" cat="textbook">

                <title lang="eng">Intro. to Databases</title>

                <price unit="usd">39.00</price>

        </book>

</bookstore>
```

Write Xpath expressions

1.   to find the title and price of non fiction books with a price more than 50USD.
2. To find average price of textbooks.
3. To find the titles of textbooks on XML.
